Plug-In Box & Plug-In Hole

Plug in box is mechanically interlocked with the busduct housing to prevent installation or removal while the MCCB is in 'ON' position. It is equipped with an operating handle to control the switching mechanism. The plug in box makes positive ground connection to the busduct housing before making contact to the phase conductors.

MCCB Rating	L (mm)	W (mm)	H (mm)	Fig
100AF	340	230	200	1
225AF	430	265	220	1
400AF	550	310	250	2
630AF	950	365	320	2
